Website Proposal: Interactive Exploration of Impressionism

This website will offer an interactive exploration of Impressionism, focusing on the movement's use of light, color, and brushstroke techniques. Users will engage with iconic artworks through a minimalist design and simple interactive features.

Design: The design will feature soft pastel colors inspired by Impressionist paintings, with a mix of serif and sans-serif fonts for readability. CSS animations will create smooth transitions, and Flexbox will ensure easy navigation.

Interactive Features: Art Gallery with Zoom: Hovering over paintings will enlarge details using CSS transitions.

Shifting Light Tool: A slideshow or slider will show how paintings change under different lighting conditions, powered by JavaScript.

Timeline: A clickable timeline will highlight key events in Impressionism's history with links to paintings and artists.

Color Palette Tool: Static color swatches will display the color palettes of famous works.

Page Breakdown: Page 1: Introduction to Impressionism with an overview, banner image, and navigation to other sections. Page 2: Art gallery with zoom-on-hover and the light-changing tool.

Page 3: Timeline of Impressionism and a color palette tool.

This website will provide a simple, engaging way for users to explore Impressionist art with minimal complexity.
